

# webbug-js.pdf

This PDF tries to connect through JavaScript calls :-D

The script first tries to run your browser, then it connects with the Reader.

## **Comments:**

Windows:

- Acrobat Reader 8: Same behavior as with webbug-browser.pdf and webbug-reader.pdf.
- Foxit: Same behavior as with webbug-browser.pdf and webbug-reader.pdf, at the difference a popup appears to ask for user confirmation before launching the browser. However the reader still connects to the site without confirmation, as with webbug-reader.pdf

Mac:

Linux:

- Acrobat Reader 8: same behavior as Windows version.
- poppler-based viewers: not interpreting JavaScript : nothing happens.
